Letter of Recommendation

To whom it may concern,

It is an honor for us to write this letter of recommendation for B Medical Systems S.à.r.l., world leader in providing vaccine cold chain solutions.

B Medical Systems S.à.r.l. has set up state of the art vaccine cold chain centers, which are responsible for storing and transporting each Covid-19 vaccine used by the country of Luxembourg. Indeed, the most important aspect is to ensure that the different vaccines are stored and transported at the recommended temperature in order to avoid any wastage of the scarce vaccines.

B Medical Systems S.à.r.l. has helped to ensure that the Covid-19 vaccine we received from JANSSEN has been stored optimally at -20°C with zero temperature excursions in deep freezers of the type ULT U701. Furthermore, the vaccine of JANSSEN has been transported successfully in transport boxes RCW25 with PCM +4°C ensuring thereby zero wastage of the vaccine.

The Covid-19 vaccine we received from AstraZeneca has been stored optimally at +4°C with zero temperature excursions in refrigerators of the type TCW80AC and TCW4000AC. Furthermore, the vaccine of AstraZeneca has been transported successfully in transport boxes RCW25 with PCM +4°C ensuring thereby zero wastage of the vaccine.

This is a great achievement, especially when there are news about improper cold chain storage and transportation of the Covid-19 vaccines around the world.

We are pleased to write this letter of recommendation for B Medical System S.à.r.l — especially as they helped us to solve any vaccine cold chain logistic issues — in the true spirit of partnership.

We will be pleased to discuss any questions or issues that any other country faces and to work together to eliminate Covid-19 from our planet.

With our best regards,

Deputy High Commissioner,

Guy BLEY
